Xuqi-Daoqi Blueprint: Three Editions

- > A complete design document for AI receptive systems.
- > Three editions for three readers.

Three Editions

Edition	Reader	Purpose
Original	(`虚器—道器_最大框架蓝图_重绘版_20260628.md`)	Curious general readers The full historical-narrative version: from Jiahu turtle shell to modern AI
Engineering	(`虚器—道器_最大框架蓝图_纯工程转译版_v2_20260628.md`)	Engineers, researchers, technical decision-makers A zero-metaphor engineering blueprint
Annotated	(`虚器道器蓝图_注释本_20260629.md`)	Smart non-technical readers The bridge: a version that explains every concept but doesn't over-engineer

Core Concepts (Common to All Editions)

Xuqi (虚器) — Deployable Constraint Network

A temporary behavioral control structure injected via system prompt. Zero training, immediate effect, reversible. Like giving a pair of glasses to a person who talks too much.

Daoqi (道器) — Native Receptive Architecture

A permanent architectural pattern where receptive behaviors are baked into the model during training. The "glasses" become "eyes."

Central Wugua (中央无卦) — External Authorization Slot

The architectural placeholder for user decision authority. The model never makes decisions for the user. The user always retains final authority to enable advice generation.

Why Three Editions

The blueprint covers a 5,300-year trajectory of receptive science (Hetu Luoshu mathematics → Jiahu observation → Zhouyi situational classification → Laozi-Zhuangzi operational specifications → Mozhao Chan practical verification → Shaoyong mathematical models → Inner Canon human-body reception → modern psychotherapy). The core engineering insight is that all of these independently discovered the same principle: **reception precedes judgment**.

Communicating this requires different versions for different readers:

- A research paper has no space for historical context
- A historical narrative has no operational definitions
- An engineering specification has no intuition

The **Annotated Edition** fills the middle: it explains every concept in plain language while preserving the full structural picture. The reader finishes knowing: (1) what the original framework was, (2) what the engineering implementation is, and (3) how the engineering maps back to the original.

Three Edition Reading Paths

****For the general curious reader:****

Start with the Annotated Edition → if interested, read the Original Edition for full context.

****For the engineer/researcher:****

Start with the Engineering Edition → if interested, read the Annotated Edition for conceptual grounding → read the Original Edition only if you want cultural context.

****For the AI alignment researcher:****

Start with the Engineering Edition → cross-reference with the CDRA technical paper (Zenodo DOI: 10.5281/zenodo.20993162).
